NEMO ADDITIONS TO INDIVIDUAL FOOTWEAR

NEMO last is now available in **different widths**: TN2 (Narrow), TN4 (Standard), TN6 (Wide) and TN8 (Orthotic). **Nemo family is expanding**, and we hope you can find a suitable fit within this variety of styles and different last widths!

Keep in mind that you can always **design your favourite colour** by choosing materials freely within the Individual Footwear range. Adjust the perfect support level to meet your needs by changing the **heel stiffener strength** to strong or softer. Mix and match the styles with an **orthotic last** and create adjustments like increases to the sole unit leading to a perfect pair. **Custom-made insoles** can be fitted directly into the footwear to obtain the complete product.

Just customise and fit!

Although it is always challenging to guarantee full waterproof levels when designing customised footwear, specific materials, construction features, and some production methods can enhance footwear's resistance to water.

Klaveness has an assortment of certified waterproof stock styles that constitutes the best basis for individually adjusted footwear if you need water resistance. These can include bellows tongue, coated split mudguards, hooks, and, if required, waterproof membrane for linings, preparing your footwear to face the harshness of Nordic winters.

Footwear with this symbol is designed to include waterproof membrane

If required, when ordering any customised product, select "W-tex (water repellent)"

STANDARD SOLES

Standard soles are pre-made soles that are compatible with Klaveness standard lasts.

You can find different characteristics in each sole type, for example, heel height and material composition. Selecting heel height close to your lasts' heel height will give the best results!

BUILT EVA SOLES

Built EVA Soles are highly versatile, as they fit all lasts, widths and sizes.
As a separate part of the construction, it is necessary to attach a welt in a colour that matches the EVA.

We can produce Built EVA Soles to any heel height, or to fit any other specification you require. The standard EVA is Shore ≈50.

The heel height of BUILT and MILLED EVA soles is always produced according to the heel height of the last or to the one specified in the order

MILLED EVA SOLES

Milled EVA Soles are highly versatile, as they fit all lasts, widths and sizes.

The sole unit is milled from a block of EVA shaped according to your requirements. When an EVA sole is milled, there is no need for a separate welt, and the wall in the milled EVA acts as a cup to conceal some of the height visible in finished footwear. The EVA sole unit is produced without layers of material and glue.

We can produce Milled EVA Soles to any heel height or fit any other specification you require. The standard EVA is Shore ≈50.

BENEFITS:

- Conceals shoe volume by adding depth to the sole.
- There is no need to add a separate welt - it is milled from the same EVA piece as the midsole. Less glued layers result in a more flexible and appealing sole.
- Overall, it results in a more lightweight sole.
- Adapts to any last - even with different left and right foot lasts, you can achieve a similar design.
